

Optimized Air Humidification

Safety through Certified Technology

Marking the Way for You

Certified Functional and Hygiene Safety for Air Humidification Systems with the DGUV Test

Air humidification systems are often indispensable for trouble-free production processes and a comfortable indoor climate – as long as impeccable standards of hygiene can be guaranteed during operation.

Spoilt for Choice

The choice of air humidification systems is vast. Each system requires the operator to carry out proper maintenance and cleaning. Maintenance costs and results depend on the type of system.

A Selection Aid for Users

The DGUV Test Mark “Optimized Air Humidification” provides instant confirmation that the corresponding air humidification system has undergone comprehensive testing. Users of an installation that has undergone this type of testing can be sure that they are operating a functionally reliable and hygienically flawless system.

Certification at its Best

“Optimized Air Humidification” as a benchmark for air Humidification Systems

The Optimized Air Humidification Test Mark

Not only does it fulfill the requirements of the GS and Euro Test Marks, each of which documents compliance with the European safety regulations: it includes additional, more rigorous hygiene and health & safety tests and also covers the aspects of environment protection, service and efficiency.

The Testing and Certification Body Printing and Paper Converting awards its Test Marks for humidifiers in all sectors of industry the world over.

Please Note

The familiar CE mark is a self-conferred conformity declaration by the manufacturer. It is not, therefore, a symbol of quality. Independent studies show that only about 50% of systems carrying the CE mark alone meet the requirements of the European directives.
